I. ចូរបង្កើត array('i', [1,2,3,4,5,6,7,8,9]).

```

1  import array as arr
2
3  number = arr.array('i', [1, 2, 3, 4, 5, 6, 7, 8, 9])
4
5  search_val = int(input("Enter value to search: "))
6
7  if search_val in number:
8      indices = [i for i, x in enumerate(number) if x == search_val]
9      print(f"That value is presented in array at index/indices: {indices}")
10
11     new_val = int(input("Enter new value to update: "))
12     updated_count = 0
13
14     for i in range(len(number)):
15         if number[i] == search_val:
16             number[i] = new_val
17             updated_count += 1
18
19     print("Array after update: ", list(number))
20     print(f"Count of updated elements: {updated_count}")
21
22     sorted_number = arr.array('i', sorted(number))
23     print("Array after sorted: ", list(sorted_number))
24
25 else:
26     print("That value is not present in array.")

```

```

● PS D:\BBU_University_2026\Year2_Semester1\04_Data_Structures_and_Algorithms>
nd_Algorithms/Quiz/Quiz2.py
Enter value to search: 5
That value is presented in array at index/indices: [4]
Enter new value to update: 99
Array after update:  [1, 2, 3, 4, 99, 6, 7, 8, 9]
Count of updated elements: 1
Array after sorted:  [1, 2, 3, 4, 6, 7, 8, 9, 99]
● PS D:\BBU_University_2026\Year2_Semester1\04_Data_Structures_and_Algorithms>

```

លទ្ធផល៖

II. ចូរបង្កើត array មួយដោយឱ្យ User បញ្ចូលចំនួនធាតុ និងធាតុ array

```
1 import array as arr
2
3 n = int(input("Enter number of elements: "))
4 number = arr.array('i')
5
6 for i in range(n):
7     val = int(input(f"Enter element {i + 1}: "))
8     number.append(val)
9
10 search_val = int(input("Enter value to search: "))
11
12 if search_val in number:
13     indices = [i for i, x in enumerate(number) if x == search_val]
14     print(f"That value is presented in array at index/indices: ", indices)
15
16     choice = input("Do you want to update the value? (y/n): ").strip().lower()
17
18     if choice == 'y':
19         while search_val in number:
20             number.remove(search_val)
21             print("Array after deletion: ", list(number))
22         else:
23             print("No change made. Array: ", list(number))
24     else:
25         print("That value is not present in array.")
```

លទ្ធផល៖

```
● PS D:\BBU_University_2026\Year2_Semester1\04_Data_Structures_and_Algorithms>
ester1/04_Data_Structures_and_Algorithms/Quiz/Quiz2_1.py
Enter number of elements: 4
Enter element 1: 10
Enter element 2: 20
Enter element 3: 30
Enter element 4: 20
Enter value to search: 20
That value is presented in array at index/indices:  [1, 3]
Do you want to update the value? (y/n): y
Array after deletion:  [10, 30]
● PS D:\BBU_University_2026\Year2_Semester1\04_Data_Structures_and_Algorithms>
```

III. ចូរបង្កើត Array Calculator ដោយឱ្យ User បញ្ចូលលេខក្នុង Array

```
1  import array as arr
2
3  n = int(input("Enter number of elements: "))
4  numbers = arr.array('d')
5
6  for i in range(n):
7      val = float(input(f"Enter element {i + 1}: "))
8      numbers.append(val)
9
10
11 count = len(numbers)
12 total_sum = sum(numbers)
13 avg = total_sum / count
14 max_val = max(numbers)
15 min_val = min(numbers)
16
17 print("\n--- Array Calculator Results ---")
18 print(f"1) Number of Elements : {count}")
19 print(f"2) Sum : {total_sum}")
20 print(f"3) Average : {avg:.2f}")
21 print(f"4) Maximum : {max_val}")
22 print(f"5) Minimum : {min_val}")
```

លទ្ធផល៖

```
● PS D:\BBU_University_2026\Year2_Semester1\04_Data_Structures_and_Algorithms>
